DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on May 11, 2006 has been entered.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1, 3-5, and 7-9 are rejected under 35 U.S.C. 102(b) as being anticipated by Kiso et al (US 5,030,169).

Kiso et al disclose an automatic tensioner for a timing chain, comprising: a plunger (22) inserted inside a cylinder (23) for changing the tension of a timing chain by a linear sliding movement (see Fig 4); an oil pump (P) pumping and supplying oil from an oil pan to said cylinder; and a reservoir tank (26) for preserving oil between said oil pump and said cylinder, wherein said reservoir tank is integrally formed with a cylinder (see Fig 4) block, and said cylinder is accommodated inside said reservoir tank (see Fig 5).

Re claim 3, wherein an oil supply hole (32) formed at said reservoir tank is installed higher than said cylinder (see Fig 5).

Re claim 4, wherein said cylinder is formed with an oil hole (40) at an end in an opposing direction from said plunger's insertion for connecting with said reservoir tank (see Fig 4).

Re claim 5, a cylinder (23); a plunger (22) within said cylinder (see Fig 4), where said plunger is configured to be attached to a tensioner arm (6) configured to change tension of a timing chain; and a reservoir tank (26) for supplying oil to said cylinder (see Fig 1), wherein said reservoir tank is integrally formed with a cylinder (see Fig 4) block, and said cylinder is accommodated inside said reservoir tank (see Fig 5).

Re claim 7, wherein an oil supply hole (32) formed at said reservoir tank is installed higher than said cylinder (see Fig 5).

Re claim 8, wherein said cylinder is formed with an oil hole (40) at one end opposing a direction of said plunger's insertion within said cylinder (see Fig 4), where said oil hole is configured to connect with said reservoir tank (26).

Re claim 9, comprising an oil pump (P) coupled to said reservoir tank and configured to pump oil from an oil pan to said cylinder (see Fig 5).
